

KREJCI DUMP SITE

CUYAHOGA VALLEY NATIONAL PARK

Public Meeting

July 20, 2005

EQ Industrial Services, Inc

Quick Facts

- EQ Holding (the parent company of EQ Industrial Services, Inc.) was founded in 1958
- EQ specializes in hazardous and non-hazardous waste management disposal
- EQ has the largest treatment facility capacities on the East Coast
- EQ owns and operates over 9 federal permitted RCRA Hazardous Waste Facilities throughout the East Coast
- EQ is the 23rd largest industrial waste management company in the country

EQ Industrial Services, Inc.

Preliminary Project Sequence

PHASE I

- Site Mobilization of the West Site
 - Utilities Hookup – both East and West Sites
 - Support Facilities
 - Access Roads
 - Road Signage
 - Boundary Surveying
- Initial Waste Classification Sampling
- Clearing of trees and brush of the West Site
- Soil Excavation and Loading Activities
- Post Excavation Sampling/Cleanup Confirmation
- Site Regrading
- Permanent Vegetation of Disturbed Areas

EQ Industrial Services, Inc.

PHASE II

- Site Mobilization of the East Site
 - Support Facilities
 - Access Roads
 - Road Signage
 - Boundary Surveying
- Initial Waste Classification Sampling
- Clearing of the East Site
- Soil Excavation and Loading Activities
- Post Excavation Sampling/Cleanup Confirmation
- Site Regrading
- Permanent Vegetation of Disturbed Areas
- Removal of Utilities and Support Facilities of Both Sites
- Final Demobilization

EQ Industrial Services, Inc.

Krejci Dump Site

Scope of Work

- EQIS shall implement a soil remediation plan to remediate 9 Operating Units (OU) at two main locations along Hines Hill Road
- The two locations known as East and West Parcels equate to approximately 77,000 cubic yards of soil and debris requiring removal and disposal
- Once the soil/debris is removed, a certified laboratory shall analyze post excavation samples to ensure all excavations meet the DOI and ROD clean up criteria
- Once the analysis for a specific quadrant is reported, a third party consultant, along with the DOI representative, will accept or deny the cleanliness of the excavation

Scope of Work - Continued

- Once an area is deemed clean the OU will be regraded and permanent vegetation planted
- If an area contains elevated chemical constituents further excavation and sampling will be required prior to final acceptance of the area for regrading and final vegetation
- At the successful completion of all OU's, EQIS shall demobilize all utilities and support structures/facilities and return the site to it's original condition

EQ Industrial Services, Inc.

Krejci Traffic Plan

- All trucks/vehicles entering both the East and West Sites will access the area from Hines Hill Road
- All loaded vehicles will travel east on to Hines Hill Road to Highway 8, Industrial Parkway
- From Industrial Parkway, the vehicles will continue either on Highway 8 or Route 80 (Ohio Turnpike) to their final destination
- EQIS shall have a flagman on Hines Hill Road throughout the work day to direct and maintain traffic patterns at both site locations
- Appropriate road signs will be installed in both directions of Hines Hill Road to caution motorists of “Trucks Entering Highway” and “Construction Entrance Ahead”
